

The 2013-14 Budget:

# Examining the State and County Roles in the Medi-Cal Expansion

MAC TAYLOR • LEGISLATIVE ANALYST • FEBRUARY 2013

2013-14 BUDGET

## EXECUTIVE SUMMARY

**Federal Health Care Reform Includes Optional Medi-Cal Expansion.** Under the Patient Protection and Affordable Care Act (ACA), also known as federal health care reform, the state has the option to expand its Medicaid Program (known as Medi-Cal) to cover over one million low-income adults who are currently ineligible. For three years, beginning January 1, 2014, the federal government will pay almost all the costs associated with the expansion. Beginning January 1, 2017, the federal share of costs associated with the expansion would be decreased over a three-year period until the state pays for 10 percent of the expansion and the federal government pays the remaining 90 percent. Currently the counties have the fiscal and programmatic responsibility for the care for the low-income adult population that would be covered by the expansion.

**Governor Proposes to Adopt Expansion and Offers Two Options to Implement It.** The Governor proposes to adopt the optional Medi-Cal expansion and proposes two options to implement the expansion beginning January 1, 2014: (1) a county-based approach under which counties would assume fiscal and programmatic responsibility for the provision of health services to the expansion population or (2) a state-based approach under which the state would expand its existing state-administered Medi-Cal Program to cover the expansion population.

**LAO Assessment.** The expansion would likely have significant policy benefits, including improved health outcomes for the newly eligible Medi-Cal population. In the short term, fiscal savings to the state as a whole would far outweigh the nonfederal costs associated with providing health care to the expansion population. After a decade, when the enhanced federal matching rate is reduced from 100 percent to 90 percent, we estimate that overall savings to the state as a whole (state and local governments) would likely continue to outweigh costs. Despite the significant uncertainty about the long-term costs and savings associated with the expansion, on balance, we believe the policy merits of the expansion and the fiscal benefits that are likely to accrue to the state as a whole outweigh the costs and potential fiscal risks. We recommend the state adopt the optional expansion.

We also find that the state is in a better position than the counties to effectively organize and coordinate the delivery of health services to the newly eligible population—potentially resulting in improved health outcomes and administrative efficiencies. As a practical matter, we also believe the state is better positioned than the counties to successfully implement an expansion by January 1, 2014. We recommend the Legislature adopt a state-based expansion, shifting the fiscal and programmatic responsibility of providing health care to the expansion population from counties to the state.

Given this shift of responsibility, we further find that implementation of a state-based approach results in the need for a reexamination of state-county funding arrangements for indigent health care. Accordingly, we recommend the Legislature redirect a portion of funding currently allocated to counties under 1991 realignment for indigent health.

2013-14 BUDGET

## INTRODUCTION

Beginning January 1, 2014, the ACA gives state Medicaid programs the option to expand health coverage to most adults under age 65—including childless adults—with incomes at or below 133 percent of the federal poverty level (FPL) who are not currently eligible. In California, counties generally have the fiscal and programmatic responsibility for providing health care to this population. The federal matching rate for coverage of this expansion population will be 100 percent for the first three years, but will decline between 2017 and 2020, with the state or counties eventually bearing 10 percent of the additional cost of health care services for the expansion population.

The Governor has proposed to adopt the optional expansion. He has also outlined two distinct approaches to implementing the expansion—a state-based approach and a

county-based approach—but has not indicated a preference for either approach. Under both approaches, the Governor indicates that the expansion will require a reassessment of the state-local fiscal relationship.

In this report, we provide the Legislature with recommendations on three major issues related to the optional Medicaid expansion.

- Should the state adopt the optional Medicaid expansion?
- Should the state adopt the state-based or county-based approach?
- What changes to the state-county fiscal relationship would be appropriate under the expansion and how should they be implemented?

## BACKGROUND

The existing allocation of federal, state, and local responsibilities and funding for health programs is complex. Below, we discuss: (1) the major programs administered by state and local governments that provide health services to low-income populations in California, (2) provisions of the ACA that have significant effects on these state and local programs, and (3) recent actions the state and counties have taken toward implementing the ACA.

### Overview of Medi-Cal

*Medi-Cal Is California's Primary Health Coverage Program for Low-Income Individuals.* Medicaid is a joint federal-state program that provides health coverage to certain low-income

populations. The program is voluntary for states. In California, the Medicaid program is administered by the state Department of Health Care Services (DHCS), and is known as Medi-Cal. Currently, Medi-Cal provides health care services to over eight million qualified low-income persons—including families with children, pregnant women, seniors, and persons with disabilities. The income threshold used to determine eligibility varies. For some groups, such as parents, the income threshold is about 100 percent FPL. (In 2012, the FPL is \$11,170 per year for an individual and \$23,050 for a family of four.) For other groups, the income threshold is significantly higher—reaching up to 200 percent FPL for pregnant women and 250 percent FPL for children (when the transition

of the state’s Healthy Families Program (HFP) into Medi-Cal is complete in 2013). Generally, a low-income childless adult who is not elderly or disabled does not qualify for Medi-Cal under current eligibility standards. As discussed in more detail below, the ACA gives California the option to significantly expand eligibility for the Medi-Cal Program beginning January 1, 2014, mainly to low-income childless adults, as well as some parents.

***Medi-Cal Costs Split Between the State and Federal Government.*** The federal government pays for a share of the cost of each state’s Medicaid program. The percentage of program costs funded with federal funds is known as the federal medical assistance percentage (or “federal match”). The Medi-Cal Program currently—and historically—receives a 50 percent federal match for most services, meaning that the program generally receives one dollar of federal funds for each state dollar it spends on those services. The federal government also provides an enhanced federal match for certain program costs, such as certain types of health services and the implementation of information technology systems.

The federal government only pays for emergency and pregnancy-related services for certain populations that meet all current eligibility standards with the exception of certain immigration status requirements—including undocumented individuals and qualified aliens who have been in the country for less than five years (newly qualified aliens). In California, newly qualified aliens are eligible to receive full Medi-Cal benefits and the costs of the additional benefits are funded entirely with state General Fund monies. Medi-Cal does not pay for nonemergency and nonpregnancy-related services for undocumented individuals.

***The Medi-Cal Delivery System.*** There are two main Medi-Cal systems for the delivery of health care: fee-for-service (FFS) and managed

care. In the FFS system, a health care provider receives an individual payment for each service provided to a Medi-Cal enrollee. The FFS enrollees generally may obtain services from any provider who has agreed to accept Medi-Cal payments. In Medi-Cal managed care, DHCS contracts with certain managed care plans, also known as health maintenance organizations or “plans,” to provide health care coverage for Medi-Cal beneficiaries residing in certain counties. Plan enrollees may obtain services from providers who accept payments from the plan, also known as a plan’s “provider network.” Medi-Cal reimburses the plans on a “capitated” basis with a predetermined amount per person, per month and the plans reimburse providers for health care services delivered to enrollees.

## Overview of County Health Services

Counties provide a wide variety of health services in California, including physical health care for medically indigent adults—or low-income individuals who cannot afford health insurance coverage and who are not eligible for Medi-Cal. Throughout this report, we focus on the counties’ role in providing *physical* health care services to the medically indigent—also known as indigent health care. Counties are also the primary providers of public health services and behavioral health services for low-income individuals in California. For more information on counties’ role in the provision of public health and behavioral health services, please see the nearby box.

### The State-County Relationship and Indigent Health Care in California

For most of the state’s history, counties have provided safety-net health care services to low-income individuals who do not have health insurance coverage—commonly referred to as the

medically indigent. Counties' indigent health responsibilities were statutorily established in the 1930s, with the enactment of Welfare and Institutions Code (WIC) Section 17000, which generally requires counties to provide health care to medically indigent individuals. With the establishment of the Medi-Cal Program in 1966, some county responsibilities for providing health care for low-income Californians shifted to the federal government and state. However, counties remained responsible for providing health care to medically indigent individuals who are not eligible for Medi-Cal or other state health programs—a population that consists primarily of

childless, non-elderly adults. Many counties also provide indigent health services to undocumented individuals, although this is not specifically required by WIC Section 17000.

Over the years, the roles of the state and counties in providing health care to the medically indigent have been redefined several times. Below, we discuss the major historical developments that shaped the relationship between the state and counties in the delivery of indigent health care.

***Medi-Cal Eligibility Expanded to Certain Medically Indigent Adults (MIAs).*** In 1971, the state enacted a package of reforms to the Medi-Cal Program. As part of this package, the state

### **Counties Provide Other Important Health Services**

Counties provide and finance a wide variety of health services in addition to physical health care for the medically indigent, including mental health services, substance use treatment, and public health services.

***Mental Health Services.*** Counties are the primary providers of mental health services to the medically indigent (to the extent resources are available). Counties also provide mental health services to Medi-Cal enrollees, primarily for serious mental disorders that require treatment by licensed mental health care specialists such as psychiatrists. Services include medication support, case management, prevention programs, and crisis intervention. Counties are responsible for paying the nonfederal share of these specialty mental health treatments provided to Medi-Cal enrollees. The nonfederal share of funding for mental health services comes from various sources, including 1991 Realignment, Proposition 63 (Mental Health Services Act), 2011 Realignment, and county General Fund revenues.

***Substance Use Treatment.*** Counties are the primary providers of substance abuse treatment services to the medically indigent (to the extent resources are available). Counties also provide substance abuse treatment services to Medi-Cal enrollees. The Drug Medi-Cal program offers services that include: outpatient drug free clinics and the Narcotic Treatment Program. Counties are responsible for paying the nonfederal share of drug and alcohol treatment provided to Medi-Cal enrollees. The nonfederal share of funding for substance use treatment services comes from various sources, including 1991 Realignment, 2011 Realignment, and county General Fund revenues.

***Public Health Services.*** Many public health programs and services are delivered at the local level by county public health departments. These programs address public health issues, such as communicable disease control, environmental health, smoking cessation programs, childhood exposure to lead, and family planning services.

extended Medi-Cal eligibility to childless adults as a state-only program—shifting the responsibility of providing health care to this population from counties to the state. In conjunction, counties were required to assume a share of cost for the Medi-Cal Program. Following this shift of childless adults to Medi-Cal, county obligations under WIC Section 17000 decreased substantially. However, counties continued to incur costs for services provided to undocumented individuals and others unable to qualify for Medi-Cal.

***Two Constitutional Amendments***

***Substantially Altered State-County Relationship.***

In the late 1970s, voters approved two amendments to the State Constitution which substantially altered the state-local relationship: Proposition 13 (1978) and Proposition 4 (1979). Proposition 13 immediately reduced local government property tax revenues by more than 60 percent. Proposition 4 generally requires the state to reimburse local governments if the state mandates that local governments provide a new program or a higher level of service.

***State Provided Aid to Counties Following Proposition 13.*** In response to the significant decline in local government revenues resulting from Proposition 13, the state took a variety of actions to provide fiscal relief to local governments. In 1979, the Legislature enacted Chapter 282, Statutes of 1979 (AB 8, L. Greene), which, among other things, provided fiscal relief to counties by: (1) eliminating the county share of cost for Medi-Cal and (2) establishing annual subventions to counties to support county public health programs and indigent health care. As a condition of receiving state aid for health programs under AB 8, counties were required to spend a specified amount of county purpose general revenues on county public health and indigent health programs.

***MIAs Removed From Medi-Cal.*** In 1982, facing rising costs in the Medi-Cal Program

and a significant budget deficit, the Legislature eliminated Medi-Cal eligibility for childless adults. Under WIC 17000, health care responsibilities for childless adults once again fell to the counties. To support county costs of providing health care to individuals no longer eligible for Medi-Cal, the Legislature established two new programs: (1) Medically Indigent Services Program (MISP), which provided state funding to support indigent health costs in larger counties, and (2) County Medical Services Program (CMSP), which allowed smaller counties to contract with the state to provide indigent health care. Both MISP and CMSP were funded with annual appropriations from the General Fund. In order to receive state funds under MISP or CMSP, counties were required to continue meeting the provisions in AB 8 related to the expenditure of county general purpose revenue on public health and indigent health programs.

***State Enacted a Major Change to State-County Relationship.*** In 1991, the state enacted a major change in the state and local government relationship, known as realignment. The 1991 realignment package: (1) transferred several programs from the state to the counties, including health and mental health programs; (2) changed the way state and county costs are shared for social services and health programs; and (3) increased the sales tax and vehicle license fee (VLF) and dedicated these increased revenues for the increased financial obligations of counties. Under realignment, the original revenue allocations to counties were based on the amount of funding each county received for the realigned programs from the state just prior to realignment. Annual growth in realignment revenues is allocated based on a separate set of formulas, primarily intended to prioritize funding for costs due to increased caseload and to equalize funding levels across counties.

**1991 Realignment Modified Indigent Health Funding.** The 1991 realignment package dedicated a portion of the increased sales tax and VLF revenues to fund AB 8 health payments, MISP, and CMSP—eliminating state General Fund support for these programs. Consistent with county expenditure requirements under AB 8, the 1991 realignment package required counties to maintain a minimum level of expenditure—a maintenance-of-effort (MOE)—on public health and indigent health programs.

**County Medically Indigent Programs Vary Significantly**

Currently, the manner in which each county finances and delivers health care to the medically indigent varies across the state. Counties have flexibility with respect to the services provided, the populations served, the method of delivering services, and the funding used to provide services. Figure 1 describes three broad categories of county-based programs that have provided coverage to MIAs in recent years. This section focuses on the characteristics of county medically indigent

programs. We discuss the federally funded waiver programs later in this report.

**Counties Vary in How They Deliver Services to Medically Indigent Individuals.** The manner in which counties deliver health services to the medically indigent varies from county to county. Counties are often characterized by the degree to which they directly provide health care services to the medically indigent population. For example, counties generally fall into one of the following categories:

- **Provider Counties**—MISP counties that own and operate inpatient hospitals and clinics that provide care to essentially all individuals, whether or not they have health coverage. Currently, there are 12 provider counties, including some of the most populous counties in California, such as Los Angeles County.
- **Payer Counties**—MISP counties that pay for medically indigent care services through contracts with private or University of California (UC) hospitals, community clinics, and/or private

**Figure 1  
County-Based Indigent Health Programs**

Program	Description
Medically Indigent Programs	<b>Longstanding County Programs That Pay for Health Services for Some Medically Indigent Adults.</b> Characteristics of each county’s medically indigent program vary substantially, including the maximum income level and residency requirements necessary for eligibility.
Coverage Initiatives	<b>Federally Funded Programs Authorized in Ten Counties Under a 2005 Medicaid Waiver.</b> Beginning in 2007, counties were eligible for 50 percent federal funding for care provided to medically indigent adults enrolled in the Coverage Initiative. In return, counties were required to meet certain federal requirements related to improved system integration, quality, and coordination of care. In 2011, these programs were replaced by the Low Income Health Programs (LIHPs) authorized under the new Bridge to Reform waiver.
LIHPs	<b>The Bridge to Reform Waiver Built Upon the Existing Coverage Initiatives in the Ten Counties by Authorizing Optional County-Based LIHPs in Every County, Beginning in July 2011.</b> Most, but not all, counties currently operate a LIHP. Many counties that operate a LIHP have a separate medically indigent program for adults who are not eligible for the LIHP.

physicians. These counties generally do not own or operate facilities that provide physical health care services.

- **Hybrid Counties**—The MISP counties that do not operate a hospital, but that operate outpatient clinics that provide care to low-income populations. These counties also have contracts with hospitals and, in some cases, other community clinics and/or private physicians.
- **CMSP Counties.** As discussed above, a group of 35 rural and/or small counties that pays for medical care to MIAs in participating counties. The CMSP currently contracts with a third-party administrator (Anthem Blue Cross) to organize the delivery of health care services to certain medically indigent populations in these counties.

Figure 2 illustrates the degree to which each county directly provides care to its MIA population.

Historically, medically indigent programs have provided episodic care, with little emphasis on primary care services, preventative care, and care coordination. For example, some payer counties simply reimburse providers for services provided to individuals who show up at the hospital with an immediate need for care. In provider counties, many of the medically indigent program enrollees are indigent individuals who show up at the hospital emergency room with an illness or injury in need of treatment. In recent years, some counties have begun to place a greater emphasis on actively enrolling medically indigent individuals in the program as a way to emphasize preventative and primary care services.

**Significant Differences in Eligibility for Medically Indigent Programs.** Generally,

potential enrollees are screened for Medi-Cal eligibility before they are determined eligible for medically indigent programs. Eligibility differs among counties in several ways, including the maximum income threshold and immigration status requirements. For example, some counties do not cover services for undocumented individuals, other counties cover limited services for undocumented individuals (such as emergency services), while other counties provide full services to undocumented individuals. Most medically indigent programs provided coverage to citizens and legal residents with incomes up to 200 percent FPL. However, several counties had income thresholds either above or below 200 percent FPL. In one county, the maximum income threshold was 63 percent FPL.

**Counties Use Various Sources of Funding to Pay for Care for the Medically Indigent.** In addition to 1991 health realignment funding described above, counties use a variety of funding sources to pay for medically indigent costs. Some of the most common sources of nonfederal funds are described in Figure 3 (see page 12). In many instances, counties have flexibility to use these funds on different types of services and populations. For example, a county may use a mix of 1991 health realignment funds, county general funds, and mental health realignment funds to provide services to MIAs.

In addition, provider counties receive a wide variety of supplemental payments from the federal government, including Medicaid Disproportionate Share Hospital (DSH) payments and other payments associated with California's Medicaid Section 1115 Waiver (discussed in more detail below). These funds are meant to at least partially offset uncompensated care costs, such as costs associated with providing care to the uninsured and care for which the county does not receive enough payment to fully cover its costs.

Figure 2

**County Systems for Delivery of Care to Medically Indigent Adults Vary Widely**

Source: Based on data compiled for report produced by California HealthCare Foundation in 2011. CMSP = County Medical Services Program.

**Counties Are Major Safety-Net Providers**

County-operated hospitals and clinics are a major part of the health care safety net. The health care safety net may be broadly defined as the health care providers—both public and private—that, as part of their core mission, provide services to all patients regardless of ability to pay or legal status. There are many different types of safety-net providers, including county-hospitals, private safety-net hospitals (such as Children’s Hospitals), county clinics, and rural health clinics. Generally, these providers serve a high percentage of individuals enrolled in Medi-Cal, county-based indigent health programs, and the uninsured. The financing structure for these providers is complex and they depend on a wide variety of funding sources. For example, under the terms of the Section 1115 waiver, counties are financially responsible for the nonfederal share of Medi-Cal inpatient services delivered to certain Medi-Cal enrollees. However, the waiver also provides a significant amount of federal funding that is intended to help ease the burden of uncompensated care costs for these hospitals.

**Overview of the ACA**

The ACA, also referred to as federal health care reform, is far-reaching legislation that makes significant changes to health care coverage and delivery in California. The ACA is, in part, designed to create a health coverage purchasing continuum that makes it easier for persons to access, purchase, and maintain health care coverage. As individuals’ incomes rise and fall; as they become employed, change employers, or become unemployed; and as they age, they are to have access to different sources of coverage along the coverage continuum. Creating this continuum requires the modification of existing government programs and integration of these programs with new coverage options created by ACA. For more information on the various provisions in the ACA that potentially affect California state health programs, please see our May 2010 report, *The Patient Protection and Affordable Care Act: An Overview of Its Potential Impact on State Health Programs*. Below, we discuss some of the major ACA provisions that have fiscal implications for state and local governments. We note that there are numerous other provisions of the ACA that will affect state and county finances—both directly and

indirectly—that we have not described here.

**Figure 3**

**Examples of Nonfederal Funding Sources Used to Pay for Care for the Medically Indigent**

- ✓ **1991 Health Realignment Funds.** Vehicle license fee (VLF) and state sales tax revenues that are allocated to the health account of each county.
- ✓ **1991/2011 Mental Health Realignment.** The VLF and state sales tax revenues that are allocated to the mental health account of each county.
- ✓ **Tobacco Master Settlement Funds.** A portion of funds paid by tobacco companies under the Master Settlement Agreement between the states and certain tobacco companies is allocated to counties.
- ✓ **County General Funds.** The public funds of the county primarily from tax revenues.

**Provisions Encourage Individuals to Purchase Health Coverage**

*Creates Penalties for Certain Individuals Without Health Insurance Coverage.* Beginning January 1, 2014, the ACA requires most U.S. citizens and legal residents to have

health insurance coverage or pay a penalty. This requirement is commonly known as the individual mandate. Certain individuals are exempt from the individual mandate, including those exempt from filing federal taxes due to their low-income status. A significant portion of the Medicaid population has income below the federal tax filing threshold and would be exempt from the individual mandate. The ACA also gives the federal Secretary of Health and Human Services (Secretary) some flexibility to establish other financial hardship exemptions. In light of the recent Supreme Court ruling, as discussed below, the Secretary indicates that she would use this authority to exempt additional low-income individuals in those states that chose not to implement the optional Medicaid expansion.

***Establishes Health Benefit Exchanges With Federal Subsidies to Purchase Coverage.*** The ACA establishes entities called Health Benefit Exchanges. Through these exchanges, individuals and small businesses will be able to research, compare, check their eligibility for, and purchase health coverage. In California, citizens and legal residents with family income between 100 percent and 400 percent FPL who do not qualify for Medi-Cal will be eligible for federal subsidies to purchase health coverage through the California Health Benefit Exchange (also known as the Exchange or Covered California) that is currently under development.

**Allows for Optional Medicaid Expansion to Adult Populations**

***Authorizes Medicaid Expansion up to 133 Percent FPL.*** The ACA gives states the option to significantly expand their Medicaid programs, with the federal government paying for a large majority of the additional costs. Beginning January 1, 2014, federal law allows state Medicaid

programs to expand coverage to most adults under age 65—including childless adults—with incomes at or below 133 percent of the FPL who are not currently eligible. (After taking into account a technical adjustment to eligibility required under the federal law, the income limit is, in effect, 138 percent of the FPL.) Generally, this population includes nonpregnant, nondisabled childless adults. In addition, some parents with incomes between 100 percent and 133 percent FPL would become eligible. Similar to other Medi-Cal eligibility categories, undocumented immigrants would only be eligible for limited services, such as emergency services. As shown in Figure 4, the federal matching rate for coverage of this expansion population will be 100 percent for the first three years, but will decline between 2017 and 2020, with the state eventually bearing 10 percent of the additional cost of health care services for the expansion population.

***Recent Supreme Court Ruling Makes Medicaid Expansion Optional for States.*** Originally, the ACA included a provision that would allow the federal government to withhold a state’s Medicaid funding if the state did not adopt the expansion—effectively making the Medicaid expansion mandatory. A recent U.S. Supreme Court ruling found the mandatory Medicaid expansion unconstitutional and struck down this provision

**Figure 4  
Federal Matching Rate for Health Care Services Provided to Medicaid Expansion Population**

Calendar Year	Federal Match
2014	100%
2015	100
2016	100
2017	95
2018	94
2019	93
2020 and thereafter	90

of the ACA—effectively making the Medicaid expansion optional for states. Subsequent federal guidance confirmed that the Medicaid expansion is now truly voluntary—meaning states may choose to adopt or eliminate the coverage expansion at any time. Recent guidance from the federal government also indicates that states may not partially adopt the Medicaid expansion. In other words, states may either adopt the expansion up to 133 percent FPL or not adopt the expansion at all. For example, states may not adopt the expansion only for adults up to 100 percent FPL.

### **Makes Changes to Medi-Cal Eligibility and Enrollment**

*Changes Methodology Used to Determine Financial Eligibility.* Beginning January 1, 2014, the ACA makes changes to the methodology used to calculate income when determining Medicaid program eligibility for most beneficiaries—excluding certain populations, such as seniors and persons with disabilities. Currently, the methodology used to determine financial eligibility for Medicaid is complex—often involving verification of an applicant’s assets and accounting for a variety of income deductions and exemptions. The ACA generally simplifies the standards used to determine financial eligibility. The two major changes to the methodology are:

- Requiring the use of a new methodology to calculate income, known as Modified Adjusted Gross Income (MAGI). As part of this change, various deductions to applicant income that are now permissible would end.
- Asset tests will no longer be used to determine eligibility.

*Changes to Outreach and Enrollment Processes.* In addition to the eligibility changes identified above, the ACA also includes provisions aimed at streamlining the enrollment processes

and coordinating with other entities that will offer subsidized health insurance coverage to low- and moderate-income persons. For example, persons may be determined eligible for Medi-Cal after applying through a website operated by the Exchange. The state is required to use available electronic data sources, such as tax information from the Internal Revenue Service, to determine eligibility prior to asking for additional information from the applicant. The Exchange will also be conducting outreach activities aimed at enrolling uninsured individuals in health coverage, including Medi-Cal.

### **Reduces Medicaid Hospital Funding**

The ACA requires over several years an \$18.1 billion total reduction in federal funding nationwide for DSH allocations, which now go to hospitals that serve a disproportionate share of Medicaid beneficiaries and the uninsured. The fiscal impact of this change will be felt mainly by counties that operate DSH-supported hospitals.

## **Overview of Federal Waivers That Promote Coverage Expansion**

The state and counties have, in effect, already taken significant steps toward implementing the optional expansion under ACA. Much of that progress was facilitated by the state’s Section 1115 Medicaid Demonstration Waivers that provided federal funding for, among other things, county-based indigent health programs. (These allow states to waive federal Medicaid requirements in order to have the flexibility to modify their Medicaid programs in ways that are favorable to beneficiaries.) In 2005, the federal government approved the first of two 1115 waivers in California—hereafter referred to as “the previous waiver.” In November 2010, several months after passage of ACA, the federal government approved the next waiver—called California’s “Bridge

to Reform” waiver—hereafter referred to as “the waiver.” Below, we discuss some of the significant components of the waivers and how they relate to funding and care for the medically indigent.

***Previous Waiver Authorized Coverage Initiatives in Ten Counties.*** Among other things, the previous waiver authorized county-operated Coverage Initiatives in ten counties to provide medical care to low-income adults. In 2007-08, the following counties began operating Coverage Initiatives: Alameda, Contra Costa, Kern, Los Angeles, Orange, San Diego, San Francisco, San Mateo, Santa Clara, and Ventura. Counties operating Coverage Initiatives received 50 percent federal funding for care provided to enrollees. In return, counties were required to meet certain federal requirements related to improved system integration, quality, and coordination of care. The general goal of the Coverage Initiatives was to assign individuals to a “medical home” in an effort to shift care away from more expensive episodic care to a more coordinated system of care to improve access, quality of care, and efficiency.

***Bridge to Reform Waiver Authorized Low Income Health Programs (LIHPs).*** The Bridge to Reform waiver built upon and expanded the existing Coverage Initiatives in the ten counties by authorizing optional county-based LIHPs in every county. County LIHPs are split into two different types of coverage groups.

- ***Medicaid Coverage Expansion (MCE).*** Counties may offer coverage to low-income adults up to 133 percent FPL who would become eligible under ACA for Medi-Cal in 2014. Counties have the option to establish their MCE income eligibility thresholds below 133 percent FPL.
- ***Health Care Coverage Initiative (HCCI).*** If a county provides coverage to the MCE population up to 133 percent FPL, it has the

option to operate a HCCI that offers coverage to adults with incomes between 133 percent and 200 percent FPL.

Currently, most counties are operating—or plan to operate—LIHPs that provide coverage to low-income populations, many of whom would qualify for Medi-Cal under the expansion. As shown in Figure 5 (see next page), the characteristics of each LIHP—such as income threshold—vary from county to county. In addition, counties began implementing LIHPs at different times over the course of the last couple of years and currently several counties have not implemented a LIHP.

Counties that operate a LIHP receive 50 percent federal matching funds for services provided to LIHP enrollees. (Counties pay for the nonfederal share.) In return, a county must comply with certain federal requirements, such as minimum covered benefits and provider network adequacy. As discussed in more detail below, the LIHPs share some similar characteristics with Medi-Cal, but there are also significant differences. Many counties that operate a LIHP also operate a separate medically indigent program for adults who are not eligible for the LIHP, including undocumented immigrants and uninsured individuals with incomes too high to qualify for the LIHP.

***Waiver Provides Additional Federal Funding for State Programs and Public Hospitals.*** In addition to the LIHPs, the waiver made over \$7 billion in federal Medicaid matching funds available over a five-year period to offset state costs for certain state health programs and provide funding to public hospitals intended to help preserve and improve the county-based health care safety net. For example, as much as \$2 billion may be used to offset state General Fund costs for certain state health programs, such as the Genetically Handicapped Persons Program (GHPP) and the California Children’s Services Program (CCS), over the five-year period. Another \$1.9 billion may be used to offset some of

the uncompensated care costs that public hospitals incur when treating the uninsured. The waiver also established a new \$3.4 billion Delivery System Reform Incentive Pool (DSRIP) that is used to

encourage infrastructure development, innovative models of care delivery, improved care for certain diseases, and more broad improvements in public hospital care.

## GOVERNOR’S PROPOSAL

The administration has stated its commitment to adopting the optional Medicaid expansion authorized under ACA beginning January 1, 2014. The Governor’s budget summary document presents two distinct approaches—a state-based expansion and a county-based expansion. However, the administration neither

indicates which approach it prefers nor provides an estimate of the fiscal effects on the state for either approach. Accordingly, the budget does not reflect any costs or savings related to the optional Medi-Cal expansion. The Governor’s budget summary notes that counties will realize savings associated with MIAs becoming eligible

**Figure 5**  
**County Low Income Health Program (LIHP) Characteristics Vary**

	Upper-Income Limit (Percent of FPL)	Implementation Date	Monthly Enrollment <sup>a</sup> (As of October 2012)

for Medi-Cal under the expansion. It further asserts that state implementation of ACA will require it to assess how much of these county savings “should be redirected to pay for the shift in health care costs to the state.” While the administration has not clarified how this redirection would occur, it suggests possible changes in the state-county fiscal relationship.

***State-Based Expansion Approach.*** Under the state-based expansion approach, the state would build upon the existing state-administered Medi-Cal Program and managed care delivery system. Aside from long-term care, covered benefits for the expansion population would be similar to benefits available to the currently eligible population. According to the administration, this option would require a discussion with the counties around the appropriate state and local relationship in the funding and delivery of health care, and what additional programs the counties should be responsible for if the state assumes the majority of the nonfederal health care costs for the expansion population. (Currently, the counties are generally responsible for paying for the nonfederal share of health care costs for the expansion population.) Under the Governor’s proposed state-based approach, the counties would assume programmatic and

fiscal responsibility for various human services programs, such as subsidized child care.

***County-Based Expansion Approach.***

Under this approach, the counties would have operational and fiscal responsibility for implementing the Medi-Cal expansion. The financial responsibility for the nonfederal share of Medi-Cal costs for the expansion population would belong with the counties. Operational responsibilities include some functions currently performed by the state and Medi-Cal managed care plans to administer the program such as:

- Establishing networks of providers to deliver health care services.
- Setting payment rates to providers.
- Processing claims billed by providers.

Counties could build upon their existing medically indigent programs and LIHPs to operate the expansion. The county-based expansion would meet statewide eligibility standards and cover a minimum benefits package similar to coverage requirements for health plans offered on the Exchange. Counties would also have the option of covering additional benefits (other than long-term care) for the expansion population. The administration indicates this approach would likely require federal approval.

## LAO ASSESSMENT

The optional Medi-Cal expansion presents a number of important fiscal and policy considerations for the Legislature. Below, we provide our assessment of (1) the major policy benefits of the expansion, (2) the major fiscal effects—on both the cost and savings

fronts—an expansion would have on state and local governments, (3) whether or not, on balance, the state should adopt the expansion, (4) what approach should be taken to implement the expansion if adopted, and (5) what types of changes to the state-local fiscal relationship would be appropriate under such an adopted expansion.

## Expansion Has Significant Policy Benefits

### Coverage Expansion Has Benefits for Certain Low-Income Adults

Perhaps the primary policy merits of adopting the expansion relate to the benefits associated with increasing the number of Californians with health coverage—specifically low-income adults who are citizens and legal residents.

**Expansion Would Increase Health Coverage for Low-Income Adults.** While it is certain that a number of individuals currently without health coverage would ultimately obtain coverage under the expansion, there is significant uncertainty regarding this number. While some of the newly eligible Medi-Cal enrollees currently receive health coverage from county-based programs, including county indigent programs or LIHPs, indigent adults with incomes below 133 percent FPL yet too high to qualify for coverage in some counties would gain access to health coverage under the expansion. In addition, in many cases, the coordination of the services delivered would potentially be much better under the Medi-Cal Program (discussed in more detail below).

Estimates of the newly eligible population range from 1.4 million to nearly 3 million individuals. Under the expansion, and other provisions of the ACA that are intended to encourage individuals to obtain health coverage, estimates suggest that roughly 50 percent to 75 percent of the newly eligible population would likely *enroll* in Medi-Cal. Based on our review of the literature, we believe the expansion would result in about 1.2 million new Medi-Cal enrollees by 2017. Plausible estimates, however, range from 750,000 to about 2 million newly eligible Medi-Cal enrollees.

**Health Coverage Has Significant Benefits for Enrollees.** Generally, obtaining health coverage increases an individual's access to health care services. Enhanced access to health care services may lead to improved health outcomes for the newly covered population. For example, individuals with health coverage are more likely to seek primary and preventative health care—services that are likely to result in improved long-term health outcomes. In addition, there is evidence that a coverage expansion for low-income adults would result in lower overall out-of-pocket medical expenditures and medical debt for the newly covered populations, as well as better self-reported health.

### Expansion Would Reduce Uncompensated Care Costs

The expansion would likely reduce the total amount of uncompensated health care provided in California. In addition to the significant fiscal effects on counties (which we discuss in more detail below), many health care providers—including private hospitals, clinics, and physicians—often provide care for which they receive no direct reimbursement. For example, according to data from the Office of Statewide Health Planning and Development (OSHPD), California hospitals provide over \$1 billion annually in “charity care”—services provided for which the hospital receives no direct reimbursement. In some cases, providers receive substantial supplemental payments from the federal or state government that help offset some of these uncompensated care costs. Under an expansion, over a million individuals may obtain Medi-Cal coverage—thereby reducing the overall amount of uncompensated care provided in California. A reduction in total uncompensated care costs may reduce some of the associated financial burden on health care providers and other payers for health care services.

## Expansion Would Have Major Fiscal Effects on State and Local Governments

The optional expansion would have major fiscal effects on state and local governments, regardless of whether a state-based or county-based approach were adopted. We describe these impacts below.

### Expansion Costs Are Likely Minor in the Short Term, but Potentially Significant in the Long Term

*Expansion Costs Are Subject to Substantial Uncertainty.* Estimates of the costs to provide services to the expansion population are subject to considerable uncertainty. Numerous national and state-level studies have attempted to estimate the number of additional enrollees and related government costs that would result from the Medicaid expansion—with significantly varying results. In addition to the typical challenges associated with projecting costs in the Medi-Cal Program—such as projecting underlying caseload growth and medical inflation—several additional major factors contribute to the overall uncertainty when projecting expansion costs, including:

- **Eligible Expansion Population.** The total number of individuals who would become eligible for the Medi-Cal Program under the expansion is subject to significant uncertainty.
- **Take-Up Rates.** The percent of eligible individuals who would actually enroll in the expanded program—often referred to as the “take-up rate”—depends on a variety of factors, including behavioral responses to the individual mandate, the effectiveness of outreach activities, and the degree to which a simplified application process reduces barriers to enrollment.
- **Per Capita Cost of Coverage.** The cost of providing health coverage to the expansion population largely depends on the health characteristics of the newly enrolled population. There are limited data that can be used to precisely estimate the cost to provide health care services to the expansion population since most of these individuals were previously ineligible for Medi-Cal.
- **Remaining State and Federal Decisions Contribute to Uncertainty.** Remaining state policy decisions could impact the cost of the expansion. For example, it is still unclear exactly which benefits package would be provided to the expansion population—a decision which affects costs. At the federal level, a reduction in the federal matching rate for the expansion population as a method to reduce federal deficits would increase the nonfederal share of costs and potentially significantly increase nonfederal costs.

To illustrate the broad range of potential Medi-Cal expansion costs, we estimated costs over a ten-year period under three scenarios, each involving a different set of assumptions regarding the eligible population, take-up rates, and average cost per new enrollee, as seen in Figure 6 (see next page). (We note that these are estimates of the cost of providing health care services to the expansion population. They do not include administrative costs.) The potential for the particular assumptions used in each of these three scenarios is based on our review of a wide variety of studies and reports, including: (1) models that attempt to predict the size of the expansion population, (2) previous studies analyzing Medicaid take-up rates in California and across the country, (3) information on costs to provide services to nondisabled adults

currently in the Medi-Cal Program, and (4) preliminary cost information from county-run Coverage Initiaves and LIHPs.

We consider the moderate-cost scenario the most likely of the three scenarios presented. In our view, the low- and high-cost scenarios are plausible, but not likely.

**Short-Term Nonfederal Cost of Expansion Would Be Minor.** Under all three scenarios illustrated in Figure 6, there would be no costs to the state as a whole through 2015-16 because the federal government would pay 100 percent of the cost of health services. Under the moderate-cost scenario, the state as a whole would begin to incur costs in the low hundreds of millions of dollars starting in 2016-17 as the federal matching rate begins to decline.

**Estimated Long-Term Costs of Health Services Vary Widely, but May Be Substantial.** Under our moderate-cost scenario, nonfederal expansion costs increase to over \$600 million annually beginning in 2020-21 when the state as a whole would become responsible for 10 percent of the costs. Under the alternative low- and high-cost scenarios, nonfederal expansion costs could be as low as \$300 million or as high as \$1.3 billion annually beginning in 2020-21. Under all three scenarios, the federal government would pay about 94 percent of the expansion costs over the ten-year period, with state or counties paying the remaining 6 percent.

**Uncertain, but Relatively Minor Costs for Eligibility Determinations.** It is important to note that while an enhanced federal match would be applied to the *health care services* provided to the Medi-Cal expansion population, this enhanced federal match is not available for some *administrative costs*, such as costs associated with

**Figure 6**

2018-19	2,697	2,522	175	5,332	4,985	347	11,872	11,101	772
2019-20	2,853	2,610	242	5,668	5,186	482	12,746	11,662	1,083
2020-21	3,026	2,723	303	6,042	5,438	604	13,722	12,350	1,372
2021-22	3,213	2,892	321	6,448	5,803	645	14,789	13,310	1,479
2022-23	3,403	3,063	340	6,862	6,176	686	15,894	14,305	1,589

**Key Assumptions**

Eligible population in 2014	1.4 million	1.8 million	2.8 million
Average take-up rates <sup>b</sup>	50%	65%	75%
Annual average cost per new enrollee in 2014	\$3,000	\$3,500	\$4,000

<sup>a</sup> Estimates do not include administrative costs.

<sup>b</sup> The "take-up rate" is the percent of eligible individuals who actually enroll. Estimates assume a steady take-up rate by July 1, 2016.

ACA = Patient Protection and Affordable Care Act.

conducting eligibility determinations. (There is, however, an enhanced federal match for changes to technological systems that need to be made in order to conduct Medicaid eligibility determinations under the ACA.) Therefore, the state as a whole would pay the traditional 50 percent cost-share for some of the additional costs of determining eligibility for the expansion population. The conversion to MAGI eligibility and other changes that streamline the eligibility processes would likely result in some efficiencies and lower per capita eligibility costs. However, some of the details of the eligibility determination process under the ACA are still being determined at the state and federal levels. These unresolved policy decisions and implementation details make the future costs for eligibility determinations for the expansion population highly uncertain.

**County Savings on Indigent Health Care Would Likely Outweigh Expansion Costs, for at Least a Decade**

*Significant Federal Funding Would Offset County Costs for Certain MIAs.* As discussed above, health care that is currently provided to the expansion population is largely funded by counties. The expansion would leverage a significant amount of federal funding to provide care to the medically indigent population that would become eligible for Medi-Cal. Generally, this population is currently the programmatic and fiscal responsibility of counties. The total number of individuals who are currently enrolled in county-based programs who would become eligible for Medi-Cal under the expansion is uncertain because the income thresholds and residency requirements used in these county programs vary. However, based on our preliminary estimates, almost 600,000 individuals who are currently enrolled in county-based programs would transition to Medi-Cal under

an expansion. Once enrolled in Medi-Cal, the enhanced federal funding available for health services provided to these individuals would almost entirely offset current county costs in the near term and mostly offset county costs in the long term.

*Data Limitations Make County Savings Estimates Subject to Considerable Uncertainty.* Poor data availability makes estimating county savings difficult. The state does not currently collect data on county spending for MIAs. Perhaps more importantly, there is no single source of information that can be used to precisely estimate county spending on the portion of the medically indigent population that would become newly eligible for Medi-Cal.

*Preliminary Analysis Indicates County Savings Likely Range From \$800 Million to \$1.2 Billion.* In our view, the MCEs provide a reasonable starting point for estimating current county spending on the expansion population. The number of MCE enrollees is well known, as shown in Figure 5. Unfortunately, it will take at least a couple of years for counties to complete the process of calculating, reporting, and reconciling costs for health care services provided to MCE enrollees. In the absence of reliable cost information for current MCE enrollees, we used per-enrollee cost information from the Coverage Initiatives to develop a proxy for per-enrollee MCE costs. A preliminary evaluation of the Coverage Initiatives conducted by the UCLA Center for Health Policy Research indicates that average per-enrollee costs were \$3,861 and \$3,312 annually in the first and second years of implementation, respectively. We note, however, that, as a proxy for MCE costs, the per-enrollee cost information from the preliminary evaluation of the Coverage Initiatives has a few significant limitations, including:

- ***Cost Estimates Are Based on Preliminary Reports From Counties.*** Although the Coverage Initiatives began operating in 2007-08, the publicly available cost information is still preliminary and subject to final reconciliation. In addition, some counties may not have reported cost information that they knew was ineligible for federal reimbursement.
- ***Some Coverage Initiatives Targeted High-Risk Populations.*** In a few counties, enrollment for the Coverage Initiatives was targeted toward high-risk populations with chronic conditions, such as diabetes and hypertension, or individuals with urgent medical conditions. The MCEs generally focus enrollment on a broader population that likely has fewer health risks and lower per-enrollee costs.
- ***Coverage Initiatives Had Fewer Federal Requirements.*** Under the terms of the new waiver, the MCEs must meet certain requirements that were not part of the Coverage Initiatives, such as the requirement to provide HIV/AIDS drugs. The additional MCE requirements will likely result in higher per-enrollee costs, all else equal.

Given these limitations, we used a somewhat broader range of per-enrollee cost from \$3,000 to \$4,000 annually (total funds) to estimate MCE costs. Using this range of per-enrollee costs, we estimate that counties' nonfederal spending on MCE enrollees as of October 2012 is likely between \$700 million and \$950 million annually.

Additionally, a portion of the expansion population is not eligible for an MCE but is

currently enrolled in a medically indigent program in a county that either: (1) does not operate an MCE or (2) operates an MCE with a maximum income threshold below 133 percent FPL. After including a rough estimate of additional spending in county medically indigent programs, we estimate that current nonfederal spending on health care services for the expansion population likely ranges from \$800 million to \$1.2 billion. While we recognize that this estimated range is based on limited available data, we believe it provides a reasonable basis for ongoing discussions related to reduced county spending under the expansion.

***Savings to Counties Would Likely Outweigh Nonfederal Costs, for at Least a Decade.*** Our preliminary estimates indicate that the direct county savings associated with adopting the expansion likely range from \$800 million to \$1.2 billion annually. This amount of county savings exceeds our estimates of the most likely annual nonfederal costs associated with providing health care to the expansion population through 2022-23, as shown in Figure 6.

### **Other Significant Fiscal Benefits to the State and Counties**

County savings related to the shift of adults from county-based programs into a mostly federally funded Medi-Cal is the most significant fiscal benefit to the state or local governments under an expansion. However, we discuss other significant fiscal benefits that would likely accrue to the state and counties under an expansion.

***State May Realize Savings in Certain Health Programs.*** The expansion would likely reduce state costs in certain state-administered health programs that focus on particular illnesses or diseases, such as GHPP and the

Breast and Cervical Cancer Treatment Program (BCCTP). Some individuals currently enrolled in these programs would become newly eligible for Medi-Cal and the state would receive the enhanced federal matching rate. The net fiscal effect on these types of state programs would depend on future policy decisions about the potential modification or elimination of these existing programs, but state savings could be in the low hundreds of millions of dollars annually.

***Reduced State and County Costs for Inmate Medical Services.*** A Medi-Cal eligibility expansion could result in significant savings from reduced inmate medical services costs. While federal law generally excludes individuals who are inmates being held involuntarily in an institutional setting (such as in county jails and state prisons) from the Medicaid program, there is an important exception to this rule. Specifically, inmates who are referred off-site for inpatient care lasting at least 24 hours are not excluded from participation in the Medicaid program if they otherwise meet the program's eligibility requirements. In other words, when jail or prison inmates receive such care at a hospital, nursing facility, or other facility that is outside of the correctional system, they can be enrolled into Medi-Cal and a federal match can be applied to the state's cost of the entire duration of their inpatient stay at the Medi-Cal rate. Most inmates are low-income childless adults and thus many would be part of a Medi-Cal expansion population. Under an expansion, state General Fund savings for prison inmates who would become newly eligible for Medi-Cal is potentially over \$60 million annually. For more information on potential correctional savings from a Medi-Cal eligibility expansion, please refer to our recent report, *The 2013-14 Budget: Obtaining Federal Funds for Inmate Medical Care—A Status Report*.

## **Recommend the Legislature Adopt the Medi-Cal Expansion**

The optional Medi-Cal expansion gives California the opportunity to leverage a significant amount of federal funding to pay for health care for certain low-income adults. The expansion would have significant policy benefits, including improved health outcomes for the newly eligible Medi-Cal population. In the short term, fiscal savings to the counties and the state would far outweigh the nonfederal costs associated with providing health care to the expansion population. After several years, when the enhanced federal matching rate is reduced from 100 percent to 90 percent, we estimate that overall savings to the counties and state would likely continue to outweigh costs.

We note that there is a significant uncertainty about the actual costs and savings associated with the expansion. First, the number of adults who would actually enroll in Medi-Cal and the cost to provide services to the new enrollees is highly uncertain. In addition, there is a risk that the federal government would reduce the federal matching rate and, thereby, increase the nonfederal share of cost for providing services to the expansion population. This fiscal risk is somewhat mitigated by the fact that California would be able to opt out of the expansion in the future.

On balance, we believe the policy merits of the expansion and fiscal benefits that are likely to accrue to state and county governments outweigh its costs and potential fiscal risks. Therefore, we recommend the state adopt the optional expansion. Below, we provide our assessment of the two implementation approaches outlined by the Governor and what changes to the state-county fiscal relationship would be appropriate under an expansion.

## State-Based Approach Presents Major Policy and Implementation Advantages

The administration indicates that it is considering two approaches to the Medi-Cal expansion: a state-controlled or a county-controlled program. Decisions regarding the assignment of responsibility for governmental programs invariably are complex and pose difficult questions regarding the fundamental purpose of programs and the advantages of state versus local control. (We discuss the conceptual advantages of state versus local control over any given program in the nearby box.)

In approaching the decision between state and county control over Medi-Cal for the expansion population, we recommend that the Legislature focus on promoting the best health outcomes and program efficiency—and sort out the fiscal issues afterwards. Underlying this view is a belief that

government's job is to provide public services and programs to its residents, and that government's ability to raise or reallocate revenue is solely a means to the end of providing these services and programs. We also recommend that the Legislature assign program financial responsibility and program authority to the same level of government. Under this approach, efficiency and accountability is promoted because the level of government that determines whether a program is offered pays its resulting bills.

***Should the State or Counties Control the Medi-Cal Expansion?*** In our view, with respect to the delivery of physical health care services to the expansion population, a state-controlled Medi-Cal system makes the most sense for two primary reasons. First, most of the traditional advantages of county-controlled programs (greater ability to experiment with service delivery, modify programs to meet local needs, et cetera) are probably not possible because the federal

### Factors to Consider in Assigning Responsibility for a Governmental Program

***Which Programs Should the State Control?*** If statewide uniformity is vital because service level variation would impede the achievement of overriding state objectives, conflict with federal requirements, or could create incentives for people to move across county borders, state control of the program typically is the better option. In addition, state control is more appropriate for programs where the costs or benefits of a program are not restricted geographically, and thus individual counties might underinvest in a program because the county does not see the full impact of its actions. Finally, state control over income support programs (including health care for the indigent) makes sense, because it allows the redistribution of income to reflect the resources of the entire state, as opposed to the resources of a specific county.

***Which Programs Should Counties Control?*** County control over programs offers different advantages. Counties have greater ability to adjust programs to meet the needs of their communities and experiment to determine which efforts improve program outcomes. Also, when budget constraints are significant, counties are in a better position to discern what works in their community and preserve the activities yielding the best outcomes. Thus, when program innovation, responsiveness to community interests, and efficiency are critical, it makes sense to assign the program to counties.

government likely will require a high degree of uniformity in the delivery of these services. Second, as described in greater detail below, the delivery of health care services to low-income individuals and families would probably be more organized and coordinated under a state controlled system—thereby leading to improved health outcomes for enrollees and potential administrative efficiencies.

**State-Based Approach Would Reduce Program Fragmentation**

Under the state-based approach, the DHCS and the Exchange would administer the two major free or publically subsidized health coverage options available to non-elderly low- and moderate-income persons—state-administered Medi-Cal (for the currently eligible and expansion populations) and subsidized coverage offered on the Exchange. Under a county-based expansion, coverage available to the expansion population would likely differ from the state-administered Medi-Cal Program in several significant ways—including offering different benefit packages, provider networks, and provider rates. As shown in Figure 7, a county-based approach would effectively create a third major health coverage program—county-administered Medi-Cal—for the expansion population. (Hereafter, we use the term “county-administered Medi-Cal” to describe the county-administered programs that would provide physical health care services to the Medi-Cal expansion

population under the Governor’s county-based approach.)

Operating a consolidated state-administered Medi-Cal Program for low-income populations under the state-based approach—rather than operating separate state- and county-administered programs under the county-based approach—would have several significant advantages. We discuss some of the primary advantages below.

**Consolidated State-Administered Medi-Cal Program Would Decrease Churning.** Low-income households frequently experience changes in income or household composition that cause individuals to gain or lose eligibility for different health coverage programs, potentially causing them to have to change health plans and/or providers—a phenomenon often known as “churning.” Churning has the potential to disrupt coverage, adversely affect health outcomes, and increase administrative costs. A state-based approach would likely result in less churning than a county-based approach because, under a county-based approach, adults with incomes below

**Figure 7**

**Publicly Funded or Subsidized Health Coverage Available Under a County-Based Expansion<sup>a</sup>**

133 percent FPL would potentially have to switch programs when income or household composition change. For example, a parent whose income increases from 90 percent FPL to 110 percent FPL may have to switch from the state-administered program to the county-administered program. On the other hand, if a childless adult with income below 100 percent FPL has a child, she might have to switch from the county-administered coverage to state-administered coverage. In both of the above examples, the individuals would not have to switch health plans or providers under a state-based approach.

***More Parents Would Share Coverage With Their Children Under a State-Based Approach.*** Families that obtain coverage from the same source may find it easier to navigate the health care delivery system and access appropriate medical care. Under a state-based approach, essentially all parents and children under 133 percent FPL would be eligible for state-administered Medi-Cal. Alternatively, under the county-based approach, parents with incomes from 100 percent FPL to 133 percent FPL would potentially be eligible for county-administered Medi-Cal and their children would be eligible for state-administered Medi-Cal.

***State-Based Approach Would Potentially Reduce Administrative Complexity and Duplication.*** Creating a new county-administered Medi-Cal Program would run counter to recent state efforts to consolidate health coverage programs for low-income populations. For example, California is in the process of consolidating its two largest health coverage programs for low-income families and children, Medi-Cal and HFP—a change that is partially intended to streamline and simplify the administration of health coverage programs prior to ACA implementation in 2014. The county-based approach has the potential to create additional administrative complexity by creating a new county-administered Medi-Cal

Program in each county that would have to coordinate its activities with the state-administered Medi-Cal Program and the Exchange. In addition, as discussed in more detail below, many counties would have to build the infrastructure needed to conduct many of the administrative activities that are already performed by DHCS and Medi-Cal managed care plans—including contracting with providers and/or health plans, setting provider rates, and processing claims.

### **State-Based Approach Leverages Existing Systems for Organizing and Coordinating Care**

The two expansion approaches outlined by the administration would likely create very different systems for organizing and coordinating care delivered to the expansion population. It is our understanding that, under the state-based approach, the state would attempt to contract with Medi-Cal managed care plans to arrange for the delivery of care to all new enrollees. For example, managed care plans would perform the following functions:

- Establish networks of providers to deliver health care services.
- Set payment rates to providers.
- Process claims billed by providers.

Under the county-based approach, counties would be responsible for performing these same tasks. The administration indicates that counties would build on their existing medically indigent programs and LIHPs to deliver care to the expansion population.

***Medi-Cal Managed Care Plans Have Significant Experience Organizing and Coordinating Care.*** In 2012-13, approximately 5.4 million out of over eight million Medi-Cal enrollees are expected to receive care from Medi-Cal managed care plans. In most large

counties, these plans have significant experience coordinating care for low-income populations, including an established process for assigning enrollees to a primary care provider and emphasizing preventative care as a way to avoid more serious medical conditions that result in unnecessary hospitalizations. In addition, managed care plans also have significant experience with the administrative activities that are typical of an organized care delivery system.

***While Certain Counties Have Made Progress Developing Organized Systems of Care . . .***

Historically, many county medically indigent programs provided fragmented and episodic care, with limited care coordination and little emphasis on primary care or preventative care. However, in recent years, some counties have improved their systems for delivering care. For example, through the Coverage Initiatives, some counties made significant progress developing provider networks, assessing access to specialists, managing referrals, offering disease management programs, and building an infrastructure to promote and monitor quality. Many of these counties were able to leverage existing health systems and local managed care plans, as well as create new relationships with private providers to accomplish these goals. Under the LIHPs, these counties have an opportunity to build upon the progress under the Coverage Initiatives, and new counties operating LIHPs have opportunities to achieve similar progress toward building organized and coordinated systems of care.

***. . . Significant Challenges Remain.*** Despite the improvements made in certain county delivery systems under the Coverage Initiatives, significant obstacles to implementing the county-based expansion statewide remain. We have serious concerns about counties' capacity to successfully implement a coverage expansion of

this magnitude by January 1, 2014. Many counties started operating LIHPs within the last couple of years and some counties do not currently operate LIHPs. At this point, it is unclear how much progress recently established LIHPs have made in establishing provider networks and coordinating care. In addition, despite improvements in care delivery made under the Coverage Initiatives, many of these counties may lack the administrative resources needed to implement the expansion by January 1, 2014, such as the ability to quickly secure contracts with additional providers to serve the additional enrollees and develop the capacity to process a large number of additional claims. Some counties may be able to leverage existing relationships with their local managed care plans or other third-party administrators to perform these activities. However, in our view, many counties lack the existing relationships and infrastructure necessary to effectively implement these changes, particularly in the short term.

**County-Based Approach Faces Other Implementation Obstacles**

***What if Certain Counties Are Unwilling or Unable to Adopt the Expansion?*** As discussed above, many counties may lack the infrastructure necessary to implement an expansion by January 1, 2014. Under the county-based option, the administration indicates that there would be statewide eligibility standards, but only counties would offer coverage to the expansion population—a state-administered program for the expansion population would not exist. At this time, it is unclear how the county-based expansion would be implemented statewide if certain counties are either unwilling or incapable of implementing the expansion.

***Federal Approval of County-Based Approach Is Uncertain.*** The administration indicates that

the county-based approach would require federal approval of a waiver. At this point, many of the details about the county-based approach are unclear so it is difficult to comment with much confidence on the likelihood of obtaining federal approval for such an approach. However, we believe there is a risk that the state might not receive federal approval. The LIHPs were established under California's Bridge to Reform waiver under the assumption that LIHP enrollees would transition to the state-administered Medi-Cal Program on January 1, 2014. The conditions of the waiver require the state to complete a detailed plan to transition LIHP enrollees to Medi-Cal and the Exchange on January 1, 2014. A county-based approach would require an amendment to the existing waiver and represent a significant change in policy from what was previously approved by the federal government.

***Implementation Timelines for County-Based Approach Appear Unrealistic.*** We believe implementation of the county-based approach by January 1, 2014 may be unrealistic. In addition to the significant amount of work at the county level needed to prepare for a county-based expansion, successful implementation by January 1, 2014 depends on quick action from both the state and the federal government on major issues. As discussed above, there is currently very little detail about the structure of a county-based approach and how it would be implemented. The Legislature would need to resolve a number of major policy and fiscal issues prior to passing legislation adopting the county-based expansion. Furthermore, after legislation is passed, the state would need to secure federal approval of a waiver. The process of submitting a waiver and receiving federal approval often takes several months, especially for a proposal of this scope.

***Implementation Challenges Under State-Based Expansion Are Less Severe.*** Many of the

implementation obstacles that we identified above would not exist under a state-based approach. However, a significant amount of effort prior to January 1, 2014 would still be required. For example, Medi-Cal managed care plans would need to prepare for roughly one million additional Medi-Cal enrollees. This would likely require securing new provider contracts in order to have an adequate network of providers to accommodate the additional enrollment. Given the significant experience managing care for the Medi-Cal population and recent transitions of additional enrollees into managed care, these plans are likely better equipped to handle the task of expanding their provider network to handle additional enrollees than the counties. The state would also need to continue to plan and implement the successful transition of MCE enrollees from county-based coverage under a LIHP into Medi-Cal managed care plans. While these activities would require a significant amount of effort, we believe a state-based expansion has a much greater likelihood of being successfully implemented by January 1, 2014 than a county-based expansion.

## **Optional Expansion Should Prompt Reassessment of County Indigent Health Financing**

As discussed earlier, for most of California's history, counties have been responsible for providing health care to MIAs. The state assumed this responsibility for about a decade in the 1970s, but transferred it back in 1982. The state's 1982 program transfer occurred shortly after voters approved two amendments to the Constitution: (1) Proposition 13, which reduced local government authority to raise the property tax (a major source of county revenue) and (2) Proposition 4, requiring the state to reimburse local governments for mandated new programs or responsibilities. Given these constitutional changes, two new programs

were created—MISP and CMSP—to provide state funding to offset county costs resulting from the 1982 shift of responsibility for MIAs. The MISP and CMSP were supported with annual appropriations from the state General Fund until 1991, when the state—as part of the 1991 realignment—created a dedicated ongoing funding source for county indigent health programs, as well as new county responsibilities for mental health and social service programs. Under 1991 realignment, counties received roughly the same amount of resources for indigent health programs as they previously received from the state General Fund, but had more flexibility in allocating these funds to meet local priorities. Consistent with past conditions regarding the receipt of state aid for health programs, the 1991 realignment legislation required counties to meet MOE requirements by spending a specified amount of county general purpose revenues on indigent health and public health programs.

As we discussed previously, we believe the state is best positioned to operate the optional expansion and, therefore, recommend a state-based approach to implement the optional expansion. The state-based optional expansion would shift the responsibility for providing health care to MIAs back to the state—significantly altering the state-county relationship that was established in 1982 and provided ongoing funding under 1991 realignment. This shift of responsibility under the optional expansion would create new state costs and reduce the need for county expenditures on indigent health programs. Given these significant changes in state and county responsibilities and finances, it is reasonable for the Legislature to consider related changes to the 1991 realignment plan. Specifically, the Legislature may wish to consider whether 1991 realignment funding, as well as the county MOE expenditure requirements for county indigent health programs, should be

modified. Additionally, it is reasonable to consider whether the distribution of the remaining 1991 health realignment funds should be updated to reflect significant changes in county responsibilities created by the optional expansion and the ACA. This section provides advice to the Legislature in considering potential changes to 1991 realignment in response to the state-based expansion.

***Optional Expansion Reverses Realignment of Indigent Health Responsibilities.*** As part of the 1991 realignment, the state provided a dedicated funding stream to counties for indigent health and public health. If the optional expansion is adopted, a significant portion of county indigent health obligations will be shifted back to the state. In light of this change in responsibilities, it would be reasonable for the Legislature to consider reallocating a corresponding amount of realignment funding to offset the state's costs for the Medicaid expansion or other state priorities and for this reallocation to occur on the same timeline as the shift of responsibilities to the state.

***How Much Realignment Funding Should Be Reallocated?*** In general, we feel it would be reasonable for the Legislature to consider reallocating the portion of 1991 health realignment funding associated with providing health care to the expansion population. However, data on county indigent health expenditures are very limited—significantly complicating the Legislature's task of determining the appropriate amount of health realignment funding to reallocate. Our review of the available county financial data suggests that counties currently spend between \$800 million and \$1.2 billion from all nonfederal funding sources to provide health care to the expansion population. Although a majority of these expenditures are supported by 1991 health realignment dollars, data limitations preclude us from estimating the extent to which county general purpose revenues or other funding

sources also pay for services for the expansion population. An alternative point of reference is the portion of total health realignment funds provided counties in 1991 attributable to MISIP and CMSP indigent care programs—which served populations very similar to the expansion population. In 1991, realignment funding for MISIP and CMSP comprised about 46 percent of total health realignment funding (about \$700 million in 2013-14). Given data limitations, in our view, this amount is the best available starting point for the Legislature as it considers the amount of realignment funds to reallocate for the benefit of the state. If the Legislature were to reallocate this amount, county programs serving the remaining uninsured population and public health programs would continue to receive annually slightly more than half of total 1991 realignment health funds (about \$800 million in 2013-14)—an amount roughly equivalent to historical funding levels for these programs. However, for the reasons discussed below, the Legislature may wish to consider leaving a higher level of 1991 realignment funds with counties.

***Other County Costs Merit Consideration.*** The Legislature may wish to consider a smaller change to county realignment funding than suggested by our above analysis for two primary reasons. First, under the ACA, provider counties are expected to face a variety of changes that potentially threaten the financial viability of county hospitals, such as significant decreases in federal funding in the coming years. To the extent preservation of the current infrastructure of county hospitals and clinics is desired, the Legislature may wish to consider leaving higher levels of realignment funding with provider counties—at least for the next few years to ease the transition of these counties to a post-ACA environment. Second, although the optional expansion would remove a significant portion of county indigent health

obligations, counties would continue to have responsibility for all the other programs funded under 1991 realignment, including social services and mental health programs. Over the last two decades many developments have affected the cost of administering these programs, in some cases increasing the cost of these responsibilities for counties. By and large, the state has not revised 1991 realignment funding in recognition of these past events. In light of this, the Legislature may wish to consider allowing counties to use some freed-up indigent health realignment funds to support other 1991 realignment responsibilities.

***Allocating Changes to Realignment Funding Amongst Counties.*** In addition to determining the amount of aggregate realignment funding that should be reallocated, the Legislature would need to determine how the resulting reduction in the amount of realignment funds allocated for indigent health would be distributed among the counties. This decision is complicated by limitations in available county financial data that make it difficult to determine the amount of realignment dollars each county spends on the expansion population. Additionally, as discussed in more detail below, the effect of the optional expansion varies significantly across counties. Consequently, apportioning reductions in health realignment funding among the counties would be very difficult. The Legislature may wish to consider a simple method of apportioning the reductions, such as distributing amounts based on: (1) county shares of 1991 realignment health funding or (2) county shares of new Medi-Cal enrollees under the optional expansion. However, the Legislature should consider working in concert with the counties to develop apportionment formulas more reflective of varying circumstances across counties.

***Legislature Should Consider Reducing County MOE Requirements.*** Although county indigent health programs are primarily funded

with 1991 realignment funds, counties supplement indigent health programs with funding from other revenue sources, including county general purpose revenue. As a condition of receiving indigent health realignment funds, counties are required to meet MOE requirements by spending a specified amount of county general purpose revenue on indigent health and public health programs. In recognition of county contributions to indigent health programs, it would be reasonable for the Legislature to consider reducing county MOE requirements. This would allow counties to use these county revenues for other purposes.

**Implementing Changes to 1991 Realignment Funding**

After determining the appropriate amount of realignment funding to be used to offset state costs, the Legislature would need to select a mechanism to effectuate the change. Below, we discuss two possible approaches: (1) depositing transferred realignment funds in the General Fund and (2) shifting state programmatic and fiscal responsibilities to counties, creating offsetting savings for the state. Each of these approaches has benefits and drawbacks. However, on balance, we suggest the Legislature use a simple version of the second approach—shift some state program costs to counties—to effectively transfer county indigent health savings

to the state. This approach is discussed further below. We caution the Legislature that all of the approaches we discuss in this section present some risk of complications with provisions of the Constitution—the most significant of which we summarize in Figure 8. Ultimately, the Legislature may wish to consider submitting its plan to voters for approval, in order to reduce the risk of future legal challenges.

*Shifted Realignment Funds Could Be Deposited in General Fund.* The most straightforward method of using realignment revenues to offset state costs would be to deposit these revenues into the General Fund. This approach would be relatively simple, easy to understand, and provide legislative discretion over the allocation of the transferred realignment funds. However, this approach could present two complications:

**Figure 8**  
**Major Provisions of the State Constitution That Complicate Changes to State-County Relationship**

Constitutional Amendment	Year	Major Provisions
Proposition 4	1979	<ul style="list-style-type: none"> <li>Requires the state to reimburse local governments if the state mandates that they provide a new program or higher level of service.</li> </ul>
Proposition 98	1988	<ul style="list-style-type: none"> <li>Establishes a minimum state funding guarantee for K-12 schools and community colleges.</li> <li>Specifies that the minimum funding guarantee is based on several inputs including K-12 average daily attendance, per capita personal income, and per capita General Fund revenue.</li> </ul>
Proposition 1A	2004	<ul style="list-style-type: none"> <li>Restricts the state’s ability to reduce or change the allocation of local government revenues from the property tax, sales tax, and vehicle license fee (VLF).</li> <li>Requires VLF revenues raised under a 0.65 percent rate to be distributed to local governments.</li> <li>Defines as a state reimbursable mandate certain changes in local government shares of program costs.</li> </ul>
Proposition 22	2010	<ul style="list-style-type: none"> <li>Reduces the state’s authority to use or redirect taxes levied by local governments.</li> </ul>

- ***Resources Would Count Towards the Proposition 98 Guarantee.*** Because the state has considered 1991 realignment funds to be local revenues, the state historically has not counted 1991 realignment revenues for purposes of calculating the Proposition 98 minimum funding guarantee. If some realignment revenues were deposited to the General Fund and available for general state purposes, these funds would count towards calculating the education minimum funding guarantee. Thus, a portion of the shifted realignment revenue would benefit K-14 education and not be available to pay the state's costs related to the optional expansion.
  - ***Revision of Entire 1991 Realignment Package Needed.*** The 1991 realignment funding package includes VLF and sales tax revenues and uses varying formulas to distribute these funds across programs. Under the current funding structure, VLF revenues comprise the majority of funds allocated to counties for indigent health. The Constitution requires that these VLF revenues be allocated to local governments and does not allow them to be deposited to the state's General Fund. To avoid complications with this provision of the Constitution, the state could change the program allocation of VLF and sales tax realignment resources so that sales tax revenues were transferred to the General Fund. Such a change could have a negative effect on the realignment programs currently funded with sales tax revenues, however, because the sales tax historically has grown at a faster rate than the VLF.
- County Fiscal Responsibilities Could Be Increased.***
- Instead of depositing some 1991 realignment funds into the General Fund, the administration proposes shifting to counties some state fiscal and programmatic responsibilities—such as child care and social service programs. Counties would pay for these costs using the 1991 realignment resources formerly used for indigent health. This approach would reduce state costs without directly depositing the local realignment funds into the General Fund, thereby decreasing potential Proposition 98 complications. The administration's proposal to shift fiscal and programmatic responsibilities to counties, however, raises several significant issues. Specifically, we believe such an approach:
- ***Adds Complexity to an Already Complicated Decision.*** Evaluating programs as to their suitability for state-county realignment is extremely involved and requires significant deliberation by the Legislature and discussions with the administration, counties, and program stakeholders. For example, the Governor has suggested child care responsibilities be realigned to counties. Realigning this program would require the Legislature to review its current multifaceted delivery system, as well as the state's historical interest in setting eligibility and quality standards and provider rates. Given the multitude of issues the Legislature would face in implementing the optional expansion, we suggest the state avoid introducing additional issues—such as complicated shifts of authority over unrelated programs—into discussions of the optional expansion.
  - ***Raises State Mandate Concerns.*** The Constitution generally requires the state

to reimburse local governments if it mandates that local governments provide a new program, pay an increased share of a program's cost, or provide a higher level of service. Forecasting the future costs of a program is very difficult, especially for caseload-driven programs such as child care and social service programs. For this reason, in future years it would be difficult to ensure that the freed-up realignment funds were sufficient to cover the costs of new county responsibilities on a county-by-county basis. If funding fell short of the new county responsibilities, the state could be liable to claims for mandate reimbursements, creating new state costs.

- **Lacks Flexibility.** In many respects, the effect of the ACA and the optional expansion on state and county finances is not clear. A major shift of programmatic responsibilities to counties, as proposed by the administration, likely would be difficult to rescale or reverse. In our view, it would be advisable for the Legislature to reserve some flexibility in its modifications to the 1991 realignment package so that it could respond to unforeseen developments.

**1991 Realignment Indigent Health Funds Could Pay Some CalWORKs Costs.** As an alternative to making major changes to county fiscal and program responsibilities, we suggest the Legislature consider building upon a mechanism that was used in the 2011 state-county realignment plan. (This recent realignment has many similarities with the 1991 plan, but also includes criminal justice programs.) Specifically, under the 2011 realignment plan, some of its funds are used to pay mental health responsibilities that were realigned to counties in 1991. This, in turn, frees up some 1991 realignment funds to be used for

other purposes. The 2011 realignment plan requires that the freed-up 1991 realignment funds be used to help pay California Work Opportunity and Responsibility to Kids (CalWORKs) grant costs in each county. (CalWORKs is a state program that provides cash assistance and welfare-to-work services to low-income families.) Using these 1991 realignment funds to pay CalWORKs grant costs offsets state spending for this program on a dollar-for-dollar basis. It is important to note that this approach does not fundamentally increase county financial responsibility for supporting CalWORKs. Rather, 2011 realignment simply requires that any displaced 1991 realignment funds be used for the purposes of paying CalWORKs grants. The Legislature could use this approach in implementing the Medicaid expansion—that is, redirect funds provided under 1991 realignment for indigent health to an account to help pay CalWORKs grant costs in the county. This approach would not change the authority or programmatic responsibility for CalWORKs or any other program and, therefore, would be simpler to implement, less likely to raise mandate reimbursement concerns, and afford more flexibility to the Legislature than the Governor's approach.

### **How Should Remaining Health Realignment Funds Be Distributed Among Counties?**

**Some Counties Will Have Significant Indigent Costs Remaining.** Despite the savings in health programs for MIAs, some counties would continue to have significant costs for medically indigent populations after the expansion, including: (1) services to undocumented individuals, (2) services to MIAs with incomes above 133 percent FPL, and (3) fixed costs associated with continuing to operate county health facilities, such as hospitals or clinics. For example, according to estimates from the UC Berkeley

and UCLA “CalSIM” model shown in Figure 9, about 2.2 million to 2.8 million individuals are expected to remain uninsured and ineligible for Medi-Cal after the major provisions of the ACA are implemented, including the optional expansion. Some of the remaining uninsured will be ineligible for public coverage due to their immigration status. In addition, a significant number of people will remain uninsured, even though many of them are eligible to purchase subsidized or unsubsidized health coverage on the Exchange. The number of uninsured individuals who fall into the latter group will largely depend on the affordability of health insurance coverage offered on the Exchange.

According to these same estimates, about 800,000 to 1.2 million additional uninsured individuals will be eligible for Medi-Cal, but not enrolled in the program. Despite not being enrolled

in the program, Medi-Cal eligible individuals are eligible for three-month retroactive coverage. In other words, if an eligible individual becomes sick and accesses services from a county health facility, the county may help the eligible individual enroll in Medi-Cal. If that person is subsequently enrolled in the program, the county can receive Medi-Cal payment for services retroactively.

**Remaining Indigent Costs Will Vary Substantially From County to County.** Remaining indigent health costs will vary substantially from county to county. For example, a payer county that does not cover undocumented immigrants or individuals with income above 133 FPL would potentially have no remaining indigent health costs. Alternatively, a provider county that operates a hospital and provides care to undocumented immigrants and uninsured

individuals above 133 FPL would have significant costs remaining. We note that although many of the remaining county indigent health costs—such as providing services to undocumented immigrants and operating county health facilities—are not a requirement under WIC 17000, these are activities that the Legislature may consider a priority.

**Recommend the Legislature Develop a Process to Update Health Realignment Allocation.** The optional expansion would fundamentally change California’s indigent health care

ACA = Patient Protection and Affordable Care Act and FPL = federal poverty level.

system. Consequently, the indigent health obligations remaining for counties following the optional expansion are not likely to resemble the decades-old indigent health obligations on which the allocation of 1991 realignment health funds is currently based. For this reason, we recommend the Legislature revisit the allocation of the 1991 realignment health funds that are to remain with

counties in order to better align funding allocations with modern county responsibilities. As the effects of the ACA and the optional expansion on counties are varied and not clear at this time, we suggest the Legislature create a process to facilitate a dialogue between the state and counties over the next few years, with the goal of revising the allocation of 1991 realignment health funds as the effects of the ACA become more clear.

## RECOMMENDATIONS

### *Adopt the Optional Medi-Cal Expansion.*

We recommend the Legislature adopt the optional Medi-Cal expansion. The expansion would greatly increase the number of low-income adults in California with health coverage, thereby potentially improving health outcomes for this population. Most of the costs of the expansion would be paid for by the federal government and nonfederal costs for providing services to the expansion population are likely to be relatively minor in the first few years. In addition, although long-term nonfederal costs will likely be several hundred million dollars annually in several years, the large majority of total costs will likely continue to be federally funded. In addition, these costs will likely be entirely offset by significant reductions in state and county costs, including reduced county costs for MIAs, over the next decade.

We note that there are several factors that make estimating the nonfederal costs associated with the expansion subject to considerable uncertainty. For example, there is a risk that the federal government would reduce the federal matching rate for the expansion population—thereby increasing nonfederal costs. However, we also note that the expansion is optional for states and California could opt out if future costs become too high.

*Adopt a State-Based Approach.* We recommend the Legislature adopt a state-based

approach to the optional Medi-Cal expansion. Based on our initial understanding of the two expansion approaches outlined by the Governor, we believe the state is the level of government best positioned to successfully implement the expansion in a way that improves health outcomes for beneficiaries and reduces administrative complexity. The state could leverage the existing Medi-Cal managed care delivery system to organize and coordinate the delivery of care for the newly eligible population. In addition, counties would not have to build the infrastructure needed to perform some of the administrative activities that are already being performed by the state-administered Medi-Cal Program and/or Medi-Cal managed care plans. We also have serious doubts about whether the county-based approach could be successfully implemented statewide by January 1, 2014.

*Redirect a Portion of 1991 Realignment Funding to Reflect Shift in Responsibility.* The Medi-Cal expansion would shift the responsibility for providing health care coverage for most MIAs from counties to the state. Given this major shift in program responsibility, we recommend the Legislature make related changes to the funding the state provides counties for these services. Specifically, we recommend the Legislature redirect some of the funding counties receive under 1991 realignment to reflect this shift in responsibility.

***Redirect an Amount That Reflects Current Fiscal Responsibilities.*** When determining an amount of realignment funding to redirect, we recommend the Legislature use as a starting point the portion of health realignment funds (about 46 percent) historically associated with MISP and CMSP—programs which serve populations very similar to the expansion population.

***Consider Reducing the Amount to Redirect in Recognition of Remaining County Responsibilities.*** In recognition of residual county obligations and overlapping state-county priorities, we recommend the Legislature consider shifting less than suggested above. For example, to the extent preservation of the current infrastructure of public hospitals and clinics is desired, the Legislature may wish to consider leaving higher levels of realignment funding with provider counties—at least for the next few years to ease the transition of these counties to a post-ACA environment. In addition, although the optional expansion would remove a significant portion of county indigent health obligations, counties would continue to have responsibility for other programs funded under 1991 realignment. The Legislature may wish to consider allowing counties to use some freed-up indigent health realignment funds to support remaining 1991 realignment program responsibilities.

***Use Redirected Realignment Funds to Reduce State CalWORKs Grant Costs.*** We recommend the Legislature direct counties to use freed-up 1991 indigent health realignment funds to reduce state costs to pay CalWORKs grants. This approach would not change the CalWORKs program or realign program responsibilities and, therefore, would be simpler to implement and afford more flexibility to the Legislature than the Governor's approach. We caution the Legislature that any significant change in state-local finance, including this approach, presents some risk of complications with various provisions of the Constitution. Ultimately, the Legislature may wish to consider submitting its plan to voters for approval, in order to reduce the risk of future legal challenges.

***Consider Reducing County MOE Requirements.*** We recommend the Legislature consider reducing county MOE requirements established under 1991 realignment. This would allow counties to use these county revenues for other purposes.

***Develop Process for Allocating Changes to Realignment Funding Amongst Counties.*** The effect of the optional expansion and the ACA likely would vary significantly across counties. We recommend the Legislature consider working in concert with the counties to determine how the reduction in the amount of 1991 realignment funds for indigent health would be distributed among the counties.
