January 13, 2009

Hon. Edmund G. Brown Jr.
Attorney General
1300 I Street, 17th Floor
Sacramento, California 95814

Attention: Ms. Krystal Paris
Initiative Coordinator

Dear Attorney General Brown:

Pursuant to Elections Code Section 9005, we have reviewed the statutory initiative relating to state taxation (A.G. File No. 08-0020).

BACKGROUND

The state levies a personal income tax (PIT) on the California income of individuals and noncorporate businesses, such as sole proprietors and partnerships. The rates of the tax range from 1 percent to 9.3 percent, depending upon the taxpayer's income level. An extra 1 percent tax is levied on the portion of taxpayers' incomes greater than $1 million. The PIT allows various deductions from income and credits against any tax owed.

PROVISIONS OF THE INITIATIVE

This measure contains the following main provisions:

Establishes a Wealth Tax. The measure institutes a state wealth tax that levies a 55 percent tax on the net assets of state residents as of January 2010. Because the measure waives the first $15 million in wealth taxes owed for single taxpayers ($20 million for married couples), the tax would affect individuals with estates of more than $27 million ($36 million for married couples). It appears that the wealth tax would be levied on taxpayers in the state on a one-time basis, with revenues to be deposited in the newly created Environmental Superfund in 2011-12 and 2012-13. The monies in this fund would be used to acquire a majority interest in outstanding voting common stock of various petroleum, automotive, and financial companies, as well as for other environmental protection-related purposes.

Taxes People When They Die or Leave the State. The measure also imposes a new tax on the income of specified individuals when they die or move out of California. It defines this income to include both income that would ordinarily be reported and any gains in asset values. Individuals with incomes greater than $5 million would be subject to the tax, and associated revenues would be deposited in the Environmental Superfund. Whether these provisions would impair interstate commerce, and thus violate the United States Constitution, might be subject to court review.

Makes Changes to the PIT. The measure imposes an additional tax under PIT for joint-return taxpayers equal to 17.5 percent of their total taxable incomes if greater than $250,000, with an additional tax of 17.5 percent (for a 35 percent total additional tax) on incomes greater than $500,000. For single taxpayers, these additional taxes would be applied to incomes greater than $150,000 and $350,000, respectively. In addition, the measure establishes several new tax programs that would reduce PIT revenues, including refundable tax credits for: (1) particular designated organizations, (2) the costs of purchasing health insurance for certain individuals, (3) income earned by teachers, (4) higher education tuition and fees, and (5) property tax payments.

The first $8 billion of net additional PIT revenue each year would be allocated to the General Fund, with the remaining additional revenues directed to the Environmental Superfund. The measure, however, also allows the state, under specified circumstances, to transfer up to $14 billion of these remaining funds annually to the General Fund each year for up to five years after the enactment of the initiative.

FISCAL EFFECTS OF THE INITIATIVE

This measure makes major changes in the state and local tax system. Some of these changes would generate very significant behavioral and economic responses from taxpayers. For example, the taxes on people leaving the state and the additional PIT rates could have a significant negative impact on future economic activity and revenues to the state and local governments. Given factors such as these, the fiscal estimates provided below are subject to considerable uncertainty.

Impact From New Taxes

One-Time Increase From the Wealth Tax. The measure would result in a one-time increase in state revenues (realized in 2011-12 and 2012-13) as a result of the establishment of the wealth tax. The combined increase for both years could be in the range of the low hundreds of billions of dollars. The one-time revenues generated by the wealth tax would be deposited in the Environmental Superfund.

The above estimated one-time revenue effects assume no behavioral changes on the part of taxpayers. These changes and their impacts could be very significant, in which case the estimates above would be overstated.

Ongoing Increase From Tax on People Dying or Leaving the State. The revenue gain from the tax upon those dying or leaving the state is unknown, and would depend upon taxpayer behavior, but would potentially result in additional revenues in the billions of dollars annually. These revenues also would be deposited in the Environmental Superfund. This effect assumes no behavioral changes on the part of taxpayers. These changes and their impacts could be very significant, in which case the estimates above would be overstated.

Impact of PIT Changes

Ongoing Revenue Impact. The revenue gain from changes to PIT tax rates would—absent behavioral impacts—result in additional revenues in the range of the high tens of billions of dollars annually. Offsetting these additional revenues would be reductions associated with various tax programs. The largest of these reductions involve the proposed refundable health insurance tax credit, teacher tax credit, and property tax credit. These and other provisions would reduce state revenues (or result in increased expenditures in the case of refundable credits in excess of tax liabilities) in the tens of billions of dollars annually. The net increase of all of the ongoing PIT changes would be potentially in the tens of billions of dollars annually. At least $8 billion of additional revenue would be allocated to the General Fund annually, with any remaining new revenue allocated to the Environmental Superfund.

The above estimated ongoing revenue effects assume no behavioral changes on the part of taxpayers. These changes and their impacts could be very significant, in which case the estimates above would be overstated.

Other Effects

Behavioral Effects. If significant behavioral effects occur that reduce economic activity in California—such as employment, personal income, and investment decisions—then state and local government revenues would be adversely affected. The magnitude of these potential revenue losses is unknown but potentially in the tens of billions of dollars annually.

Impact on Proposition 98. Proposition 98, passed by voters in 1988, provides a minimum annual funding level for schools and community colleges that is driven by such factors as the growth in state personal income and the level of state General Fund revenues. This initiative specifically exempts the revenues from its new taxes from the provisions of Proposition 98. It appears also to "hold harmless" Proposition 98 from the impacts of the various tax reduction provisions.

Summary of Fiscal Effects

The measure would have the following major fiscal effects:

- One-time increase in state revenues potentially in the low hundreds of billions of dollars from imposition of a wealth tax, and ongoing increase in state revenues potentially in the billions of dollars from imposition of the tax on certain people dying or leaving the state. This revenue would be allocated to accomplish various goals related to environmental protection.
- Potential annual net increase in PIT revenues in the tens of billions of dollars annually. At least $8 billion annually would be allocated to the state General Fund with additional revenue allocated for environmental protection.
- Unknown state and local revenue reductions—potentially in the tens of billions of dollars annually—due to changes in taxpayer behavior.

Sincerely,

Mac Taylor
